SOFTWARE + INTELLIGENT OPERATIONS

We build the product and the systems that run it.

One delivery partner for digital products, AI automation, voice agents, workflows, cloud, and measurable growth.

divlynx.inc@gmail.com +92 3180950005 Islamabad, Pakistan

WHY DIVLYNX

Fewer handoffs. One accountable team.

Most companies coordinate a product agency, automation consultant, marketing team, and infrastructure vendor. We bring those disciplines into one operating model so the customer experience and the systems behind it are designed together.

TYPICAL FIRST RELEASE

01 / Product

Customer-facing software

Websites, platforms, mobile apps, marketplaces, commerce, memberships, and custom operational tools.

02 / Intelligence

AI and automation

Agentic workflows, voice systems, RAG, n8n integrations, and human approval where it matters.

03 / Growth

Distribution and performance

SEO, paid media, conversion tracking, analytics, cloud operations, and continuous improvement.

WHAT WE DELIVER

From first interaction to back-office execution.

AI

AI automation

Agents, RAG, tool use, guardrails, approvals, logging, and cost controls.

Voice

Voice agents

Inbound and outbound calls, qualification, scheduling, summaries, and handoff.

Workflow

n8n engineering

Connected systems, retries, alerts, self-hosting, documentation, and runbooks.

Product

Full-stack platforms

Architecture, APIs, portals, dashboards, testing, and observability.

Mobile

Mobile applications

Cross-platform delivery, offline workflows, notifications, and store submission.

Web

Web experiences

UX, responsive development, CMS, accessibility, and performance.

Specialist

Games + POS

Unity, Unreal Engine, interactive systems, checkout, inventory, and reporting.

Growth

SEO + digital ads

Technical SEO, content strategy, Meta and Google campaigns, tracking, and optimisation.

HOW WE WORK

Four steps. No black boxes.

Every engagement begins with the real work, moves quickly into a working slice, and stays visible through weekly demonstrations.

01

Map the work

We document each step, tool, dependency, exception, and decision with the people doing the job.

Week 1

02

Prototype in your stack

A working slice runs against real data so everyone agrees on what finished means.

Week 2

03

Build and demo weekly

You see working software every week. Decisions and scope changes surface while they are still inexpensive.

Weeks 3-6

04

Launch and hand over

Runbooks, architecture notes, recorded walkthroughs, monitoring, and a clear support path.

Launch

> “You always know what is being built, what it costs, and where it stands on any given Friday.”

THE ENGAGEMENT MODEL

From business problem to operating system.

Discover

Find the highest-leverage problem

- Stakeholder and operator interviews
- Current systems and data audit
- Customer journey review
- Prioritised opportunity map

Build

Ship one valuable slice first

- Architecture and delivery plan
- Design and working prototype
- Weekly production increments
- Security, testing, and observability

Operate

Own, measure, and improve

- Deployment and team training
- Documentation and ownership transfer
- Monitoring and support
- Monthly optimisation roadmap

Engagements are structured as fixed-scope product releases or retained delivery partnerships. In both models, scope, ownership, milestones, and acceptance criteria are explicit before build begins.

CASE STUDIES / 01

Live products built around real customer journeys.

SINCERE CAPITAL · NETHERLANDS

Property discovery and brokerage platform

One credible home for live property inventory, brokerage services, and direct enquiries.

WHAT WE BUILT

- Responsive listing discovery
- Clear rent, buy, sell, and management journeys
- Direct lead-capture paths

OUTCOME

- Active digital sales channel
- Inventory and services under one brand

LISTINGS · LEAD CAPTURE

JOBSYNK AI · GLOBAL

AI job application workspace

Candidates needed to move from a job description to a coherent, tailored application without disconnected tools.

WHAT WE BUILT

- AI resume workspace
- ATS analysis and guided improvements
- Cover letters and interview drafts

OUTCOME

- One role-aware application workflow
- ATS risks visible before submission

AI · SAAS

JEEUSTAAD · PAKISTAN

Verified local-services marketplace

Local hiring needed trust, payment protection, and clear communication built into the marketplace.

WHAT WE BUILT

- Task posting and worker matching
- ID verification, escrow, wallets, and disputes
- Reviews, chat, voice notes, and Android access

OUTCOME

- Comparable verified offers
- Protected funds until work completion

MARKETPLACE · ESCROW

CASE STUDIES / 02

Complex capability made clear and usable.

AFTER REALISM · AUSTRALIA

Geospatial consultancy and product platform

A technically broad offer spanning maps, spatial data, AI, cloud, and live products needed one coherent presentation.

WHAT WE BUILT

- Service, product, and project architecture
- Presentation for MapDrop and GeoChat
- Clear routes into specialist engagements

OUTCOME

- Technical capability legible to commercial buyers
- Products and consulting reinforce each other

SVELTEKIT · AWS · POSTGIS

RANGE FIT GYM · PAKISTAN

Membership and trainer platform

Prospective members needed to compare facilities, plans, and trainers before entering an account journey.

WHAT WE BUILT

- Responsive, video-led experience
- Membership catalogue and trainer profiles
- Integrated signup and login paths

OUTCOME

- Plans and trainers are easy to evaluate
- Consistent desktop and mobile experience

NEXT.JS · MEMBERSHIPS

METASTORE · PAKISTAN

Digital subscriptions marketplace

A growing catalogue across entertainment, productivity, AI tools, keys, and services needed consistent discovery.

WHAT WE BUILT

- Category-led storefront
- Reusable product presentation
- Purchase and support pathways

OUTCOME

- One destination for a broad catalogue
- New categories scale consistently

COMMERCE · SUBSCRIPTIONS

OUR OPERATING PRINCIPLES

Designed for trust after launch.

A successful delivery is not just software that works in a demo. It is a system your team understands, owns, and can improve.

01 / Visibility

Working software, weekly

Regular demonstrations, clear decisions, visible tradeoffs, and no long periods of silent development.

02 / Ownership

Your systems, your data

Clear intellectual-property terms, accessible repositories, documented architecture, and portable infrastructure.

03 / Reliability

Built for the unhappy path

Validation, retries, logging, monitoring, human handoff, backups, and sensible operational limits.

04 / Communication

Direct access to builders

The people designing and engineering the work participate directly in reviews and decisions.

05 / Measurement

Outcomes before features

We connect releases to time saved, conversion, resolution, quality, adoption, or another agreed measure.

06 / Handover

No dependency by design

Runbooks, walkthroughs, source access, and training mean you can operate without us if you choose.

START WITH THE PROBLEM

Tell us what is slow, disconnected, or ready to grow.

We will help frame the opportunity, identify the smallest useful first release, and tell you honestly when something is not worth building.
